Thread: [Need help to make files readable!](#)

Terro - February 17, 2022, 7:11 am

Hello, can you help me understand how to make this file readable. I am curious to know how it was made.

I think it must be xml or .cs files at the base before encryption into .bin file

mega.nz/file/eUY0UZDY#LnHTxv8PmMVwpohMLI9v5RMTsFZIQfibCXIqiW3hGQo

Any help is welcome?

Please explain what this is, do you think it's a virus of some kind? Cause then this needs to be boxed.

These are files that were converted into this format. Basically it's folders with cs. or xml files.

They are files for a bot for a game. The creators of the bot set up a shop that could be displayed in the bot or on the web.

To protect the creators the profiles or plugins are encrypted. Are downloaded by the bot. And that the bot could read them.

This bot is closed since 5 years. I know it's xml profiles and .cs files because at the time I used them.

Thanks a lot for clarifying, I will take a look if I can figure something out.

Thanks to you. It's encrypted with c++?

Terro - February 24, 2022, 11:00 am

If you have any idea how it was done or how to decipher it. Can you please explain it to me or give me some advice

the bot is made in c#. It compiles the script or the plugin. The .cs file, if may help you!

Terro, your files are just zLib data streams.

Restored https://mega.nz/file/1Dhijl7K#zVdr1c6drwt4wP_eMAHv2gU7hjVJ08UEalpZJt1mN6M

Short file is ZIP archive.

Long file is .NET executable.

Too good, thank you very much. How did you do it?
