Interested to see the legitimacy of this service, as it seems like most hang around for 2-3 mo. before suspension. if you have a vouch account & would like to issue one out I'd happily like to inquire.

Thank's and GLWS!

Quick question, can you mine crypto on AWS and is it profitable?

Mon73 - March 1, 2022, 5:48 am

(Mar 1, 2022 06:21 AM)Anonymouswriter Wrote: [\[CITE\]](#) Quick question, can you mine crypto on AWS and is it profitable?

Hi,

For mining you need an AWS account with high enough service limits to start "G spot instances", that is g4ad, g5g, g5 or g4dn and eventually also "P spot instances" for running p3 or p3dn instances.

If your account is new request a small increase first. For example to 4 or 8 vCPUs in one region then use it for a while and then request some more. You're not likely to get an approval for a high increase without a history of using them!

Also, if aws discovers that you are mining, the account will be suspended. To solve this problem, you must submit documents to them. If the documents are accepted, you can continue

If the documents are rejected, your account will be closed

The problem is that there is no effective way to submit documents. I mean if you send official and real documents in many cases, the documents are rejected

So let me tell you from my experience that the possibility of accepting documents is 50%

If you have an old verified account, let me know because you will be able to mine faster

Purchased a \$5k account from [Mon73](#) a few days ago and it's been working well so far.

The account comes with the same browser and proxy that was used to create the account which is nice.

The only downside is that he recommends not changing the password of the account.

Seller also provides good support and clear instructions. Will most likely buy again.

Thank you very much??? More info about Change Passwords:

?Aws password:

Yes you can, But not advise you

Why?

Only us knows the account details +

these changes may have a problem, which is the review of the account by the aws team. If they find something trivial, they will maybe ban the account

?E-mail password:

No need to do this because all e-mails are hosted on my own hosting.

This means that no one knows anything of your account details except the two of us.

Anything happens just come back to me.

If you are still afraid, here in this case I advise you to change aws to your email, nothing more.. ?

Yes there are some ways to make money with aws but it has some risks like mining ?

Hello, trusted vendor here.

I have been using the account for a week, deployed different servers across different regions, and haven't had issues.

The seller gives proper instructions and it's ready for newbies.

I will give it 9/10.

Keep it going!
