I'm running Windows 11 on my old OnePlus 6T McLaren Edition (10GB ram).

Runs a few games well also!

That's kinda cool. Does it actually run smoothly or is it tap an icon, wait a few seconds, then proceed?

It runs really really well, no lag whatsoever.

I played counter strike source and had min 60 FPS.

Okay, that's actually pretty sweet. Truly amazing how far we have come over the past decade in computing. I remember the days where 30fps was the golden number to hit and here we are playing games on pocket devices with great results.

OK that's pretty cool. I've managed to get windows 11 running on my tablet but not a dualboot.

And now choice of phone as well. Been a fan of OnePlus since the One. I still have my invite email for it lol.
