Thread: [Have you heard of PUREBASIC ?](#)

lynakouba - February 22, 2022, 9:09 am

Hi,

i want to introduce you an amazing desktop programming language called Purebasic.
It is basic on Basic syntax and is very similar to VB6 .

It can produce very powerful and fast executable WITHOUT ANY DEPENDENCIES (no dotNET and so on).

it has a large amount of libraries and functions you can use to develop pretty much anything you want.

I programmed servers, RATs, keyloggers, droppers, packers, games, automation scripts, etc.....

here is the official site's presentation :

"PureBasic is a modern BASIC programming language. The key features of PureBasic are portability (Windows, Linux and OS X supported with the same source code), the production of very fast and optimized native 32-bit or 64-bit executables and, of course, the very simple BASIC language syntax. PureBasic has been created for the beginner and expert alike. We have put a lot of effort into its conception to produce a fast, reliable system and friendly BASIC compiler. The full documentation can be found [here](#).

Despite its beginner-friendly syntax, the possibilities are endless with PureBasic's advanced features such as pointers, structures, procedures, dynamically linked lists and much more. Experienced coders will have no problem gaining access to any of the legal OS structures or API objects and PureBasic even allows inline assembly."

You can message me if you want and i will share some of my sources with you

PS : i am not in any way related to the developer and i am not making adv. i'm just an enthusiast and i want to share this language with you.
