Thread: [Automate api call | Willing to pay](#)

skinnypete2 - February 22, 2022, 1:15 pm

Been trying to figure this out for a while now but I just can't seem to get it right. On [reservecalifornia.com/Web/](#) you can reserve camping spots that do cost money to do so. All I am looking for is the automation of the API call tied to the button called "Book Now" that's it. I do not need to automate the checkout or purchase portion, just the "Book Now" button. The API URL tied to that button is "[reservecalifornia.com/Web/connect.aspx](#)" and on a successful post request it should redirect you to this URL "[reservecalifornia.com/Web/Facilities/SelectReservationPreCart.aspx](#)". The code I have linked below already has the account login part automated and at the bottom has my failed attempt at making a successful post request for "Book Now". If you can figure out what I am doing wrong let me know and tell me the price.

Code: [pastebin.com/yNFp160T](#)

Shouldn't be too hard, do you have discord or can open private messages on here yet?

Hey @skinnypete2 - the pastebin address in the OP is dead. Would you mind re-uploading?

It is doable, but you will need to use multiple types of doing the whole shebang.
