Ultimate Beginner Guide For keylogger! Best on HF!

[b]Okay this guide is for Beginners!

Before we start i have some Simple Q&A (Question? and Answered)

Q: What is a Keylogger

A: Keyloggins is the action of tracking (or logging) the keys struck on a keyboard, and then every 10 minute (Example) send the logged strokes to a Email Or FTP server.

Q: Is keylogging illegal

A: Depends how you use it. But for most users it will be illegal.

Lets say. You have a Son or sister, you want to spy on. Then its not illegal (Correct me if im wrong) But if you Spread on Warez forums (exapmle) then it is.

Q: Do i need any Coding experience

A: No. Only if you want to make a Keylogger Builder and Keylogger Stub

Q: What is the stub thing?

A: NOTE: Dont delete the stub. Or you will get a Framework error.

Lets say the builder and stub is a human. Then the Builder is the skin and what we are seeing. But the STUB is organs,heart,brain and stuff.

Okay now for the Tutorial. In this we will use Easy logger 1.3.1 made by stef111007. A old user on Hackforums.

We using this keylogger because its the first one i used. And its still FUD. And very easy and common.

Step #1.

Download Easy logger 1.3.1

<http://freakshare.net/files/rmgkhqe2/Cure-2.0.zip.html>

http://#.com/files/285185872/Cure_2.0.zip.html

Spoiler ([Click to View](#))[Screenshots:

[img]<http://www.bilder-upload.eu/upload/yUHF1yslcSffh0D.jpg>[img]

Step #2

Open up the .rar file. Use winrar for extracting. <http://www.rarlab.com/>

I reccomend make a new directory for this (There is 4 files in the .rar)

Step #3

You dont have to open STUB.exe. Open up the builder "Easy Logger 1.3.1 .exe"

Step #4

Okay? Now you have to build the keylogger you going to spread later on.
The "Easy Logger 1.3.1 .exe" Is not a keylogger but its a keylogger builder.

Step #5

[img]http://img3.imagebanana.com/img/xsk7z2qz/Untitled.jpg[/img]

[b]1. Enter your Gmail Username. Example "Ilikedeidara@gmail.com"

2. Enter your Gmail Password. Example "Mypassword123"

3. Here you enter, how many seconds there should go before sendings the logs. So if you take "60 Sec's" Then your email will get spammed 4-ever. So i reccomend using 1000 seconds or 500 seconds

4. Name of the "Keylogger" you going to build. So call it "photoshop crack.exe" or something!
REMEMBER .exe AT THE END!

5. This is Anti's I recommend you just check these.

6. Build the keylogger. And you will find "Photoshop Crack.exe" In your folder.

Done

If you infected youself. Open up cure.exe and type the name of the keylogger you build! So if i infected myself i would type "Photoshop crack.exe"

[/b]

HoodBoyz - August 18, 2010, 7:40 am

it's look like a keylogguer i bought for 1.50 \$ but not the same gui .. that's the version before the 1.3 private FINAL ?
