Thread: [Bird flu toll leaps to 2.8 million chickens and turkeys](#)

Factor8™ - March 11, 2022, 2:39 am

<https://www.agriculture.com/news/business/bird-flu-toll-leaps-to-28-million-chickens-and-turkeys>

"With new outbreaks in Iowa and Missouri, nearly 2.8 million birds — almost entirely chickens and turkeys — have died in one month due to highly pathogenic avian influenza (HPAI), the Agriculture Department said on Monday. The viral disease has been identified in 23 poultry farms and backyard flocks in a dozen states since February 8, when the first report of “high path” bird flu in a domestic flock was reported. "

Damm. I knew that the bird flu outbreak was getting bad, but I didn't know that it had crossed this stage.

This scares me thinking what would be the toll and what if this strain mutates into a version that spreads easily among humans?

Hopefully it's being contained, and not another Corona. It could be nothing and end up being a treatable influenza A, but it all depends on the mutation.

But if it's a Respiratory Dysfunction like Covid and H1N1, it'll be another shit show.

Anything is possible because these scamming motherfuckers won't be taken to task.

Ahh yes, let's spread a virus to determine its spread rate and have the chance of it causing another airborne pandemic. Genius.
