Thread: [Looking for a silent miner](#)

essie98927 - March 12, 2022, 9:01 am

Hi everyone !

I would like to have some advice on what miner to buy...

I recently bought a miner which had all the criteria that I wanted but the owner got banned from [warn] and I don't know if he will continue updating it etc...

Would love to get everyone's option on what is the best miner rn but also would like some advice on which one to buy that meets my criteria here's what I'm searching for:

- when you buy you get it for lifetime or at least like 1 year
- less than 100 bucks
- stub already encrypted and FUD
- free and unlimited reFUD (can cost a few bucks if it's really well FUD)
- i don't really care about a panel so preferably no vps needed
- mines automatically XMR and checks if it's better to mine ETC or ETH on GPU
- has a good watchdog
- preferably private build for every customer

I know I'm very picky especially for that price but I once find a good thing for that price so maybe other people know another one ! I'm also up for every proposition that you could make even if it doesn't fit my criteria

Thanks to everyone who will take time to answer much love on y'all !

(Mar 12, 2022 10:35 AM)Dyne Wrote: [\[CITE\]](#) You will be paying in cryptography more than your effort and miner is worth.

You won't find a private build for under \$100.

Drop your miner from your loader.
Here is an overview of a profitable tree.

Delivery method > Loader/Botnet > Management* > download&execute miner.

Just so you know, you will likely need 20,000 bots to get around 1000 online constantly. If you're lucky.

Maintaining those bots is no easy task.

Private, handmade crypts (not shared or public stub) for your loader, *add folder to exclusions (management), drop your miner.

Maintain your miner.

Good luck.

EDIT:

Lol.

Alright thanks for your answer

(Mar 14, 2022 03:47 AM)ZELOS Wrote: [\[CITE\]](#) Take a look at PureMiner:

<https://hackforums.net/showthread.php?tid=6150723>

you need VPS for the panel and it doesn't come crypter/FUD out of the box...

(Mar 14, 2022 04:03 AM)ZELOS Wrote: [\[CITE\]](#) That's true but ...

1.) You'll need a GUI or a webpanel to execute auto-join tasks and to switch pools for example. There's a ETH update on the way which will cut out mining.

2.) You'll never find a miner which is already FUD. With one exception: When the miner is brand new. But after a few days it will get detected also.

The 2 best miners on the market right now which will fit your needs are Unam's or PureCoder's miner.

This was my 400 post! : -)

alright thanks mate and congrats !
