Thread: [Asyncrat over TOR](#)

Jusdepenis - March 14, 2022, 7:59 am

I've been trying to run asyncrat over tor by modifying Client.Connection Clientsocket. This is [my modified code](#)

It does connect to the AsyncServer and correctly displays the data on the server but I'm not able to perform any actions like closing the client.

the original unmodified code can be found on <https://github.com/NYAN-x-CAT/AsyncRAT-C-Sharp/blob/master/AsyncRAT-C%23/Client/Connection/ClientSocket.cs>

its better when working with client/server over tor to work over HTTP not TCP and async rat is a TCP rat
