like randomly posting in forums asking for invites... I don't think someone gonna invite you. Better go play some hvh in hvh servers make new friends and let them invite you. Would make more sense then posting here or other forums or discord.

I've heard that it performs very poorly. Most likely hardcoded and not optimized enough, if at all.

if this is about hvh, most cheats perform somewhat the same NL, Skeet, bla bla going for a invite one is more a myth than a actual improvement.

Gamesense is almost public at the moment, if you find someone selling invites, don't go for anything up to 100\$ and try to get him to dm one of your friends on-forum to make sure he has a not banned account. Best of luck finding it.

this^

I sold my gamesense acc for like \$350 somewhere else tho so I know it goes for a lot regardless of the amount of invites being sold. so idk.

Just don't be dumb to go first w/o MM or having a friend of yours that's already registered receive a DM like the above user said.
