Thread: [brand new software to auto posting in 950 different websites](#)

travissimons - March 18, 2022, 9:35 pm

I'm a blogger and I usually post in several websites articles in order to promote my website.

Nowdays I'm member of 950 community websites, forums websites , bookmark websites, press releases, main social network, article submission websites, and other similar communities.

I dont have time to login in +950 websites at same time and post individually in all of them each 3 days.

My question is: What is the best solution to post in all of my 950 websites at once using an automated system (Excluding Socialpilot and hootsuite kind of sites)?

There is any software or automated bot method or any automated system, that once I'm log in all websites it can post automatically in all of them in few minutes?

(My point is save long hours log in in all of them and post it individually)

I appreciate any help.

Thanks

We can develop this through an automated system, however, it will be costly.

Ok.

Can we talk on Discord about that?

Deal with caution. We agreed on a price, I made a working prototype to show him how it'll work with HTTP requests rather than browser automation, he then told me he wouldn't pay until 3 weeks from now.

Also, OP seems very childish, threatening he has 'big ties', when he got his 25% warning level he told me ' So hope they get a explanation. They shouldnt mess with big people or will be problems...'

Then OP said he'd block me. Overall, big waste of time. DWC.

If you don't have patience to wait for a work that we agree to do in 3 weeks then you aren't a trustworthy person.

And the other members that are watching this thread now will notice that you are a impatient person that can't wait 3 weeks for a project THAT YOU ACCEPT TO WAIT INITIALLY. EVEN WORSE YOU GAVE ME -3 RP ONLY BECAUSE YOU DEMAND START IN FIRST DAY AND I SAY ONLY WITHIN 3 WEEKS AS WE AGREE. YOU BREAK YOUR WORD THAT'S WHY I BLOCK YOU.

I tryied before the bablosoft - browser automation studio and I create very good automated bots. It login automatically, post, switch to another website.

But the only things that it don't do is upload automatically images and post, and add a custom fields to insert the "title" "body of post" and "link" and using those fields to post automatically in a list of websites.

There is any software that can do the same as bablosoft do but with the changes I mentioned?

Guys please help.

I need solutions to my business

Please deal with caution, i do not think this user has the money to pay any of you. Please check their post history. It is only on free money making methods.

Can you stop give me negative reps without reason????

What kind of difamations are you doing without know me? That's insane from your side?

Do I know you?????

If you had the \$\$\$ to pay for the service you would not go on free money making ebooks. You have even replied to my thread(on the same exact forum) please grow up and stop trying to scam these poor guys that spend a lot of time developing something for you.
