this is sort of off topic but you probably wont receive an answer because if it's so less known it's probably private and people don't want to give it to others.

Opsec techniques other than the general ones you find online, like pgp or vpn stuff. Maybe some custom tools/priv8 stuff? If someone have this please pm, I have a HiddenVNC rat that I can trade them for.

Would mostly be interested In complete blackhat guides (preferably with tools) & up-to-date.
