Thread: [Watercooling and why covid sucked dick.](#)

Mr. Robot - March 31, 2022, 3:23 am

Ran my GPU almost dry over Covid as a lot of places I get my liquid from weren't available. GPU left, CPU right. 14 months worth of use, no changes or cleans.

Finally cleaned it up and refilled.

hotwheels52 - March 31, 2022, 10:58 am

Ouch, but that does look like a gnarly setup.

Mr. Robot - April 4, 2022, 1:43 am

Mac Miller - April 4, 2022, 7:12 am

What are your specs mr robot? looks much healthier!

Mr. Robot - April 4, 2022, 7:26 am

5950x TR, 3080, 128gb 4000mhz ram. Average temperature when hashcracking for long periods: 35c , while running virtual machines and all the jazz.

Mac Miller - April 4, 2022, 7:30 am

Sheesh you just made me nut dude. looking at the 3090 at all when the price goes down? hardly even need the power I guess. That's a great temperature for hard work periods, I don't have any experience liquid cooling, seems to work though lol

Mr. Robot - April 4, 2022, 7:32 am

<http://www.learntocode.lol>

I have 3x 3090s as well.

That's a lot of power! do you mine, or is that just for your rig? lol

I checked out your Setup thread and I like your RGB too. I'll post mine in a few

Hashcracking mainly. More money in it than mining.

Mac Miller - April 4, 2022, 7:42 am

Oh, interesting! how many hashes can your machine check through? I dunno if I'm like saying that right, how fast is it checking hashes?

Have you compared to directly to mining? I'm sure it's probably much more money than mining, but have you ran any tests to see just how much profit it is for your time and power consumption? sorry if I'm asking too many questions, curious

Mr. Robot - April 4, 2022, 7:46 am

Yes, so generally speaking 1 hash can be 500\$+ which can take a day or more depending.

If I do bulk hashes like md5 for 0.001 each I can do a couple K per month on the side and included in that bulk are some worth \$5 to \$250 or more sometimes. Depends what's on the escrow market or if I am contacted to do private lists.

A good day is like 12 hours of cracking and getting paid like \$1k

Mac Miller - April 4, 2022, 7:48 am

Wow so it's actually quite a bit more than Coin mining! Thanks for sharing!

Yeah it's all dependant on how much time effort and sometimes luck.

Mac Miller - April 4, 2022, 7:55 am

For sure! I see you have a lot of resources for learning this on your profile too, if anyone wanted to try themselves, thanks for being active and sharing what you know :)

Haven't been as active on HF in the last year or so but I'll be making a come back eventually.

Yeah same here, but about two years, though I wasn't very active in the hacking sections. I've been thinking about learning Python and web attacks, do you think that's a good place to start? kinda off topic

Mr. Robot - April 4, 2022, 8:00 am

Always on topic if it's learning about computer shit. Yeah i'd start you with bash and batch files - get the real basics, then move onto powershell and python. Go back and forth between them when you get sick of one go to the other.

If you learn how to do something in one, try and figure out how to do it in the other - reinforced learning and better long term.

Example.

Download a file using batch.

Download a file using bash.

Read contents of a website in Batch

Read contents of a website in Bash.

Okay thank you! I'll start with batch, I only ever had the bare-minimum basics down with that language anyway. What's Bash?

Mr. Robot - April 4, 2022, 8:11 am

Basically the linux equivalent - don't quote me on that, but like basically yeah.

I get you, in the broadest sense it is, I've never actually got into linux before so it's good to have a starting point!

Thank you! is kali Linux it's own operating system? I thought it was a pen testing program found on linux.. yikes

Mr. Robot - April 4, 2022, 8:20 am

Yup 100% it's own OS. You can dual boot it, live boot it or virtual machine it.
Dual boot: When you turn your computer on, choose to boot windows or linux.
Live boot: Boot from USB stick and when you reset your computer everything is wiped (unless you setup a persistent partition)
Virtual machine: Share devices from your main OS across to a 'virtualized' environment so it can run inside of Windows.

Thanks for the info! I have some experience setting up Tails OS off a USB, I think a virtual machine would be better for my setup currently though. What do you think?

I don't know your current system specs so I can't tell you - but as you are more comfortable outside of Linux, you might find it easier to close down/restart and look for information while having quick access to windows.

Mac Miller - April 4, 2022, 8:27 am

Yeah that's true. I'll probably run Virtualbox with it then maybe switch to a USB boot when I'm more comfortable, thank you again for sharing
