I have someone in the facility with this model

Marz Astro - July 29, 2022, 7:33 pm

You can use the rkdumper to dump the firmware on this tablet. There is a video on YouTube. "how to bacup rk tablet ROM Dumper Tool." You will need a pc or mac to use the tool but once you dump the rom you have to add the su binary and superuser.apk manually as well as resetting administrative rights to turn off the kiosk. Good luck doing all that in a facility. However, if some one gets the rom for you and hack it, then all you will need to do is flash it. This can be done with a cellphone with the Bugjaiger app installed.

So I have to know- we're you able to perform the hack successfully?? Remotely? (TG801)... If so, would you be willing to do it again? For me?....because I am quickly realizing this is FAR beyond my skill set. Please help!

I am also at a "facility" (in CA). We are getting them next month, i have seen alot of quick BS on the net any simple "how-to" would be nice along with what the limits are and how to put in simple programs that would hide your new additions... I am 15 years out of date so a little help would be nice

The most recent version is v257.0.2

I don't know s what others are looking for, but my people need a hack into the system for paid gtl services without access to a computer. This used to be accomplished by signing in at a specific time during a video visit but they have plugged that one up.
