Hi, few questions on this,

Does this indicator on TV allow function to alert on TP levels and SL levels (ofc I assume it already can for long and short)?

How accurate is this indicator for sideways market?

I had used a popular indicator in the past and the sideways market action gave false signals to the indicator. From your backtesting what % of signals are profitable?

Thanks, will be interested in this since I made 200% profit in weeks during the volatile market last time thru pure automation...but it was the sideways market that ruined long-term gain.

If offering a discount I can try it out instead. DM me and let's start a contract

SIM-2470866 - April 19, 2022, 5:07 pm

Received a vouch copy for this and I must say this is a great tool to have if you are a day trader, scalper or any sort of trader to be honest.

I love how OP explained me everything and gave me an insight. I honestly have only taken one trade via this and I must say the BUY and SELL Indicator was actually on point. I ended up walking away with 40% Profit in 2 days (just by monitoring the indicator and what OP taught me.

And the Discord access he gave was a cherry on the top. I was able to learn alot of TA from the resources so thank you very much for that!

\$50 for this is actually worth it.

One small issue from my side is Alerts. If you could setup some sort of Discord/Telegram alerts for when the Indicator has turned from BUY to SELL and vice versa (On different coins that you can select) that would be AWESOME!!

Looking forward to new updates.

I have a buy/sell indicator, also got a indicate built mainly on cryptocurrency futures aka long/short positions with TP/SL levels.

Remember buy/sell can be long/shorts just used on a smaller timeframe. The TL/SL is just fancier way for long/shorts.

Profitable like it says around 80% total win-rate through backtests, remember TL/SL examples can be lower and that shows 71% but remember how it is played out on backtesting strategies before making the 71% w/r.

I can't do anymore discounts as I did vouch copies and waiting on reviews.

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

(Apr 30, 2022 11:06 AM)KyO Wrote: [\[CITE\]](#) What time-frame is this indicator best used on? Indicator is best on your actual trading strategies, the biggest profits/saved losses are longer timeframes but each timeframe tells a different story.

Day trading I prefer 5-30 minute with if I am just scalping few minutes, I'll do TA on smaller timeframe aswell.

Amado - May 1, 2022, 5:34 pm

I have bought a subscription and would like to give a teaser of a review. Pledger is a very knowledgeable person and is very helpful. You can hop on a call with him and learn so much. His signals are on point and the indicator seems very promising. He has 1k-10k challenge which I will be following as he completed it once before. Will post my earnings in the near future! The price of \$50 is more than perfect, if focused you can make it back within the same day. Highly recommend.

What timeframe does this indicator use on? daily? 4hr? 1hr or 15mins for the most profit and winning rate respectively?

I did use some indicators with alerts in tradingview even though the profit is quite high but practically it is not the fact because tradingview has re-painting issues on certain amounts of indicator alerts.

Options for repainting can be turned off/on, also depends on the timeframes which repaint would ever matter and your type of trades so repainting isn't much of an issue for traders.

I use the timeframe pretty much on all indications as I focus mainly on TA and fundamentals. It's a win rate higher on long-time frames but short-term anything negative/positive could happen and switch directions 1-15M timeframes.
