Thread: [Having an issue trying to install OpenBullet on Linux distro](#)

ThinWhiteDuke - April 11, 2022, 10:29 am

Trying to install OpenBullet on Linux distro it's a windows program so need to install with wine:

```
wine Openbullet/OpenBullet.exe
```

when I run this I get error:

```
0009:err:mscoree:CLRRuntimeInfo_GetRuntimeHost Wine Mono is not installed
```

So I try:

```
sudo apt install Wine Mono
```

and I get result:

```
Reading package lists... Done
```

```
Building dependency tree
```

```
Reading state information... Done
```

```
E: Unable to locate package Wine
```

```
E: Unable to locate package Mono
```

Tried sudo apt-get update

But still get the same result

Package names are case sensitive, to install mono you either let wine do the installation itself, or you [install it manually](#). Some distributions like archlinux seems to have wine-mono package in their repos though...

Code sudo apt install wine

Thanks for your reply, I'll try to manually install mono and let you know what happens ?
