Thread: [This is a test](#)

**Lrrr** - April 19, 2022, 4:37 pm

Don't mind me, I'm just poking things with a stick.

**SIM-2501407** - April 19, 2022, 4:46 pm

Odd, I do not recall subscribing to this section...but I will not question it further because my memory is horrible.

Spoiler ([Click to View](#))

Unsubbed

Beautiful test btw.

Take a look at the [API documentation](#), or the stickies in this forum. Functionality is fairly comprehensive.

(Apr 21, 2022 11:42 AM)phantomman55 Wrote: [\[CITE\]](#) I did but it's more like just data from what I see like how many bytes a user has. I don't see anything interesting but I just skimmed thru it. I just see nothing but data on stats and being able to open contracts in market place. I don't see anything other than that.

I was thinking to maybe make a small feature on HF or something. I just don't think the API opens the website that far.

Maybe you didn't read the threads... The API at the moment covers read/write for posts, threads, bytes, contracts, and disputes.

What did you have in mind?

The benefit of API is that you can do normal things programmatically.

(Apr 21, 2022 12:07 PM)phantomman55 Wrote: [\[CITE\]](#) I was thinking to make a fake cmd where you can like buy fake software and fake anti-virus, firewall for you account. You can launch attacks onto

other accounts and vise versa and steal bytes and you can buy the fake software and anti-virus software using bytes.

So essentially, the Hack Game? I don't believe there is any plan to add hack game API endpoints any time soon
