Thread: [NFT project with huge potential. Marble.Cards](#)

SIM-5051500 - April 22, 2022, 4:53 pm

This NFT project is really simple and has good potential to succeed I think.

Marble Cards are collectible cards so think baseball cards but for the internet. Anyone can find one of the available sites on the internet to choose from and marble something. Once you marble a URL no one else can ever marble that URL again. When you marble a card it'll go on the auction for 12 hours where the price will continue to lower, this allows people the opportunity to poach your card (however this is rare at the time, usually happens with new collections) once the time runs out you can claim your card. Cards can also be remarbled for 10 MEM which means whatever pattern you got from marbling it the first time can be changed to something different (still random).

New websites are being added and there is a rarity system with "gold" cards being produced among the first 1000 cards for a collection. There is also an arena where you can submit your cards to be voted against other cards where you can win achievements for your card! You can also vote in the arena and earn crypto daily.

You can also make decks on your profile with whatever assortment of cards that you want. I highly recommend checking it out!
