Thread: [Cant get ASYNC RAT to open and run !](#)

TheRealLoxley - May 1, 2022, 6:22 am

I downloaded the file >

Link to the GitHub page: <https://github.com/NYAN-x-CAT/AsyncRAT-C-Sharp>

I installed it, after getting warnings that it contains a virus and malware, although I read on forums this might happen from windows. I ignored the warnings and installed it on to a VM.

When I tried to run the programme from the extracted "compiled" folder it asks me to extract or run as options. I ran it and I got the same warning and the VM wont let it run.

Any ideas?

thank you

Wollzzz - May 1, 2022, 7:59 am

no shit its rat so ofc it will say it contains malware

jmark7 - May 3, 2022, 6:47 am

you will need to completely disable windows defender else it will keep deleting it.

R4ndy_M4n - May 3, 2022, 3:23 pm

Add AsyncRAT to exclusions or disable WD then redownload and run. That's what I did.

Have a look at DcRAT and Quasar. They are pretty solid. I'm testing DcRAT and Quasar Gold currently

Are you on telgram? if so send me your username via messages and I will add you, I am also using quasar after a few days of research. I have it set up and running on an RDP. I now need to research how to make a FILE to attach the payload to, and then my research will start on targets "for educational purposes of course".

Whats your tele?

Sorry man, I want to try and use RATs for a legit business. It's just an option I am exploring. Good luck on your adventures

May I know what u intend to use it for? I am always curious on new business ideas, so I hope you dont mind me asking ;)

R4ndy_M4n - May 5, 2022, 2:14 am

I want to start a RMM service. RATs offer pretty much the same control as normal RMM software. I have a thread where I describe it more

Why are you bothering with this old post?
