Thread: [CREATE YOUR OWN TRADINGVIEW INDICATOR FOR STOCKS/CRYPTO/FOREX TODAY](#)

**Pledger** - May 1, 2022, 4:32 pm

Have you ever thought about creating your own trading indicator the way you want it?

Ever said to yourself, how do these traders make profits by using all of these indicators which I have to pay monthly for on Tradingview?

Well, let me start here...

Tradingview requires users to pay for more indicators, what happens if you can build your own indicator with every indication you need?

I currently have created over 10 indicators for stocks/crypto/forex strategies and I feel like the best way to make a higher win rate vs the average investor is by making indicators that work with a certain strategy.

Each indicator depends on your strategy and the indicators you want built-in, I can't offer a vouch copy for free. But I can offer a 25% vouch copy to the first purchase.

Each indicator price depends on the strategy, how long it will take to build, and what kinda signals/alerts/indicators you want to build inside ONE indicator.

Don't hesitate to PM me or contact me with what you need and I'll quote you on your strategy/indicator needs.

Some people want to create indicators of their own and don't have know-how?
