Thread: [Ethereum Node Hosting](#)

korean - May 2, 2022, 11:55 pm

Does anyone here know reliable hosting for an Ethereum node? Budget is \$100-\$150/m. Also any tips for maintaining a node would greatly be appreciated.

shreder - May 3, 2022, 12:53 pm

Its more cost effective to host your own node at home especially in the long run. Even a archive node can be run off a rpi4 or equal hardware. if you are interested send me a convo, ill give you some pointers.

All Nodes I think will be adding ETH nodes in a few months.

I found this for AWS at about \$90 a month.

<https://aws.amazon.com/marketplace/pp/prodview-6hnlavs4r2yhc#pdp-pricing>

Full Instructions:

FYI I was curious about ETH blockchain size. At about 350Gb which ain't too bad.

<https://bitinfocharts.com/>

I think you could run a node self-installed on any dedicated.

<https://ethereum.org/en/run-a-node/>

And some good VPS deals at SSDNodes. I've used them before, not too bad.

Not sure how the reliability for ethereum nodes is but quicknode is pretty good for solana, I know they offer eth nodes as well.

Might be worth a look
