Thread: [A Very High Quality Spreading Method hfclickbait.tumblr.com \[Browser\]](#)

Eternal Blue - May 3, 2022, 2:48 am

Check out the Tumblr blog here: <https://hfclickbait.tumblr.com/>

If you can get people to a Tumblr blog, you can get bots!

I recommend using a zipped .bat that disables Windows Defender called "Tumblr Plugin Installer.zip / Installer.bat"

This will bypass any browser warnings.

What do you think?

You can call the blog anything as well as do stuff like this:
<https://hfclickbait.tumblr.com/discord-nitro-generator/> so the link can be more convincing.

I want people to use this method and see what results they get.

Let me know your interest. ?

Edit: If you click add chrome extension it downloads putty, and in any other browser it will just download putty.

This is an example. It needs work and improvement.
My Discord: Administrator#0002

Ok.

But honestly, how many people do you think browse social media like tumblr, instagram, facebook on windows machines in modern day?

Perhaps a very good method -10 years ago, but not so much now unless you find a way to apply this to mobile; which you should be focusing on anyway if you are planning on actually profiting from your spreading.

EDIT: unless you want gamer traffic, which is essentially useless.
Yeah you're right mostly you get mobile traffic these days. You need to target the right people. Discord is great to get people if you target the right gamers. I personally don't want gamer traffic, but I still try for it anyways. I'm going through my old botnet logs and finding stuff to use. Life's satisfying right now so I thought I'd post this to help the community out. ?
