Doxware in Action The main page

What stored data looks like

Disclaimer** GPS location will depend on the device, and can be spoofed. Accuracy can be as close as 100 ft. I make no guarantees that this will be %100 accurate all of the time. However it is a very useful tool to have, once you have an address you can plug it into white pages, and have a full blown dox within seconds. Unlike traditional doxing this tool doesn't rely on bits and pieces, which in today's day, and age people are becoming ever more aware of doxing, and take preventative measures to ensure anonymity. A VPN will not help someone bypass the geolocation API. Many people are still unaware of the difference between GPS Geolocation, and IP Geolocation which works out in your favor. All sales are final, reproduction of this script in any manner is prohibited, and may be subject to DMCA takedown notices, suspension of support, and potential future releases as the project evolves.

I only deal on site, and through convo. If you do not have a valid contract, or if we are in a dispute support, and updates will be unavailable to you until a resolution is met. If you have any sales questions or support questions, please direct them to my convo inbox, as support is unavailable on the thread.

All sales rights to this product have been transferred.

I do need some testers. I'll send over a copy. Send a contract.

Blunt - May 14, 2022, 7:54 pm

I have just received a vouch copy.

This is a unique way of doxing someone and comes with a full setup guide. I found it very easy to set up and execute. I could see this being very helpful for online investigations, doxing services etc.... also user is very helpful and easy to understand. Glws
