Thread: [Enjin Jumpnet & CoinMarketCap NFTs](#)

Maskin - May 15, 2022, 5:21 am

What's your thoughts on the official [CoinMarketCap NFTs](#)? They are currently only available on the Enjin Jumpnet network which isn't very popular, but there are big names on there (such as Microsoft, Coinmarketcap, Binance and Coingecko).

Enjin JumpNet is a bridge network that allows free, instant, secure on-chain transactions of the ENJ token & ERC-1155 tokens ([Read more](#)).

This is pure speculation and most likely I'm wrong but this [Elon Musk NFT](#) and this [tweet](#), both by CoinMarketCap could indicate something?

I'm not saying this or any other NFT on the Enjin Jumpnet is a good buy/investment but I do know:

1. Enjin is one of the good NFT/Gamification projects.
2. Their Jumpnet network isn't popular (yet?)
3. When Jumpnet v1.2 is released, you'll be able to migrate all the Jumpnet NFTs to the Ethereum network.

Thoughts?
