Thread: [Minimal RAT | No port forward | Work with discord. | FUD SCANTIME](#)

Moon_Developer - May 17, 2022, 12:59 am

[Video: <https://vimeo.com/730843505>]

No port forward, nothing as a "usual" rat. You'll need only to create a discord account, and your ready to go!

Comrade - May 22, 2022, 2:21 am

are your offering any review/vouch copies?

if yes, i will take one & post a honest review about the application.....

Hi, No, i don't offer vouches for this product, but I can showcase it for you if interested.

Comrade - May 30, 2022, 9:14 am

how many bots it can hold?

do you got Telegram? I have some questions regarding this....

do you got Telegram? I have some questions regarding this....

For the way is made, it can handle all the bots you need (over 1000) because it's not running on a single pc that handle request, every bot is handled by the infected pc only, and sending requests to discord (that has infinite server) Also, I got only discord, that I can send you DM , or you can ask all questions here

Lyrice - May 30, 2022, 6:19 pm

Can you help with crypting as well? If yes, and reasonably priced, you've got your first customer.

Moon_Developer - May 30, 2022, 11:45 pm

and waht is the price for it ?
you can ofcourse, in various way, trough powershell / cmd , etc

Moon_Developer - June 10, 2022, 1:23 am

Still available and also updated for REFUD it.

kvni - June 10, 2022, 4:54 am

send me a preview of GUI on PM please

Zan - June 10, 2022, 11:55 am

In which language is this written in?

And you mentioned "No Port Forwarding" needed, so obviously it cannot be a P2P connection.
Does this use HTTP?

Moon_Developer - June 10, 2022, 11:56 am

It send requests (SSL) to discord servers (with the bot token) ; Written in c#

SSL (deprecated, nowadays TLS) is not a networking protocol, it's a cryptographical algorithm for encryption purposes. I asked you which network protocol is the client's (not server) communication based on? Obviously it's HTTP/S but I don't really know why did you not tell that in first place?

Also I would have given it a try if it was written in more low-level lang such as C/++, or maybe asm

I told you SSL to let you basically understand that the traffic is encrypted, and yes ofcourse is

sending HTTPS requests. Is written in c# (dropper and payload)
final stub is around 2.558kb

Zan - June 10, 2022, 12:10 pm

Thanks for the answers. Even though it's written in .NET doesn't necessarily mean it sucks ass, but it's not recommended to write malware in high level langs like c#. GLWS anyways!

Wrote it in c# because for me was more friendly and easy, anyways it's still really fast and (scantime) fud, if you need other info let me know!
