Thread: [Anyone into making botnet army](#)

mike324 - May 21, 2022, 9:21 pm

Hi everyone,

I have an idea to making a botnet by doing a phishing campaign to a specific organization, i am a beginner to this field so need a partner for making malware and c2 server.

If your already a bot master, i can also join your group.

If we are lucky we can get upto 15,000 bots.

LePhrack - May 22, 2022, 12:06 am

You're not going to get 15k employees to download and execute a file regardless of campaign after the more recent ransomware campaign using COVID-19 ploys these companys are much more vigilant if you had malware that could spread on a network with an open forest for instance that's another story then you might get 15k.

Yes and no. It depends at what level and what the industry is. It's not impossible.

But with network segmentation a more common practice and better company awareness, it's certainly more difficult than ever to spread your malware.

While not impossible, highly unlikely that your email would reach fifteen thousand employees unquestioned and executed by everyone is a stretch. I honestly think you'd have more luck infecting a machine on a poorly maintained network which doesn't have the segmentation you talked about.

The truth is mobiles and smart phones have ruined malware like keyloggers and remote admin tool and tools needed to infect mobiles just aren't readily available in the wild.

Actually it's a educational industry, and we are gonna target students we send email behalf university so they would belive it.

I have collected emails and crafted emails templates

No one better know about that cause studied there.

LePhrack - May 22, 2022, 4:17 am

But you're banking on the .edu email addresses being accessible outside the intranet of the educational institution e.g. outside of the schools network.

Also you're banking on these students having a personal machine, a students life is a poor one.

Jonas pizdabolas#1686

add me on discord

i have experience and all things setup for botnet, only thing lacking is good spreading, getting several from torrents but not enough

noone0x1 - May 28, 2022, 11:48 am

its a good but let me say something 15,000 bots not a big number but if you say this in a every day its a very good, but my advice develop yourself and do it and don't trust any body because its easy to steal your idea and you will get nothing in the end so develop your self
