Thread: [Help flashing jp6](#)

YonBrenner85 - May 27, 2022, 4:21 pm

I recently flashed a tablet. It worked this time. However the instructions I have kinda leave me wondering on some steps. Like I have 3 sets of instructions. One set is for just two IMG files the other is for five. The issue is one tells me to reset after boot.IMG . Do I have to reset after each IMG flash or do I just do them all?

Janus95 - May 28, 2022, 7:14 am

Hey bro I'm trying to do the same thing.but I'm stuck at trying to sync jp6 with phone. We can help each other Can u please contact me at rushandcolellc@mail.com

You need to only reboot after the boot img

Y'all shoot me a message on telegram would like to talk to yall

SickBirdi3 - August 8, 2023, 12:41 pm

So I was attempting to flash an MT8163 device with MTKClient, I have done this a few previous times successfully.

Well this time I am getting two different "error" messages after establishing a handshake.

The first message is:

Failed to dump preloader from ram

The second message is:

Preloader needed due to dram config

Any ideas on what I may be able to do to fix this issue anyone?

I also have some screenshots

I also have HexaFlash but I can't seem to get it working properly no matter what I do.
