Thread: [\[MAKE 15% OF INVESTMENT EVERY 45MIN\] GET USE OF CRYPTO ARBITRAGE \[SCALABLE\]](#)

Falchion - May 31, 2022, 9:35 am

This strategy is all about cryptocurrency arbitrage. In layman's terms, this implies moving your cryptocurrency from one location to another, then returning to your main wallet, and making a 10% - 15% profit on your investment.

About the Method:

This may be done as many times as you like, and there is no limit to how many times you can do it. There is no way your money might get stopped someplace throughout the execution. One execution takes around 30-45 minutes; you can scale the cash amount used each execution. Let's imagine we start with \$1,000 and make a +15 percent profit of \$150 in 30-45 minutes - in crypto. Instantly.

The sites where we deposit/transfer money are big legit businesses; there is no way to be duped by them.

Also this isnt an exploit or something, this is basic & legal arbitrage.

Price:
250\$

As someone who's done arbitraging before, I know for a fact that arbitraging does work, however, there's limits to the amount of profitable coins to arbitrage since the discrepancies aren't worth it when you're factoring in exchange fees as well as starting capital.

I'd like to hear your thoughts on the process behind the coins you've cherry picked for this and how much profit can be achieved with a low balance when you factor in fees, appreciate the response.
