Thread: [I found a easy way to bypass windows defender no coding needed works forever](#)

realduxv555 - May 31, 2022, 10:41 am

Open Windows Security > disable "Tamper Protection" (Restart perhaps necessary?)

Open Group Policy Editor

Go to Computer Configuration > Windows Components > Microsoft Defender Antivirus > Enable "Turn off Microsoft Defender Antivirus"

Note: Windows has a bug, where it resets that on the next reboot. Do the steps again after the next reboot, and it'll be set forever.

jmark7 - May 31, 2022, 12:54 pm

Thats disabling WD and not Bypassing WD.

Milk - May 31, 2022, 6:26 pm

This is common sense, it's just manually disabling wd on ur own pc and has nothing to do with rats/malware, who the fuck can't figure that out?

Well thats kinda disappointing i thought i found a good way, but i've used it successfully to run darkcomet and other malwares. I even got darkcomet to work on my pc after 6 hours of trying. Do u have any good spreading methods btw i sent it to my friends but nothing happened. kinda disappointed in darkcomet

vicyvince - June 1, 2022, 6:27 am

Seems interesting will look it up!

Comrade - June 1, 2022, 9:32 am

well.....its not new.

But this can be useful, if you use that process in a batch file or something similar to that & execute it before executing your payload then it can be useful.....

Hope you are getting my point. English isn't my native language though...

Cheers,
Comrade

FibonacciGeek - June 1, 2022, 2:10 pm

U can also manually delete all the windows defender files located in the system 32. Use a program to force kill defender first or run a live linux distro to temporarily delete those files.

Sounds interesting, Can you share a way to run a live linux distro to temporarily delete those files on a Windows OS?

Quicksilver16384 - June 1, 2022, 5:26 pm

LMAO this thread is funny

Ur overcomplicating it just use my method

SIM-5186353 - July 1, 2022, 3:41 pm

Here we have a tutorial, how to turn off WD, it's a joke, don't take it the wrong way???

PolymorphHF - July 7, 2022, 12:59 pm

Are....are you retarded?

I think you might be

Who TF still uses darkcomet? That's ancient rat, use AsyncRat or some shit instead

femboy_hacker - February 26, 2024, 10:15 pm

This won't work. You can't programmatically disable tamper protection because only the users System (the kernel) and Microsoft Defender, not Administrator and not a user account, can disable tamper protection.

WheeledCord - February 26, 2024, 11:50 pm

broski ur just disabling it
