Thread: [\[SOURCE\] HVNC \[the fastest and clean method.\] FUD SCANTIME.](#)

Moon_Developer - June 7, 2022, 12:41 am

Selling source code of my project [HVNC + STEALER.]

what you are gonna receive?

Moon HVNC [Source code + build]
Including Authentication system (ready to sell aswell.)
Payload [source code + build]

some features are :

- Steal Personal Data
- Steal cookies and clone into browsers
- Save cookies / Desktop for next HVNC's sessions
- Chrome Browser
- Brave Browser
- Firefox Browser
- Edge Browser
- Easy Access of Explorer / Powershell / CMD
- SCHEDULE persistence
- Registry Task persistence
- Windows Defender Exclusion
- UAC Exploits (More methods)

this isn't the TinyNuke / Pasted that you usually used. In this HVNC you got a really smart method of CreateDesktop (hvnc) that is probably the smoothest on the market (at least from the one I tested, and people i've sold this tested.) I've decided to sell this because I'm not interested anymore in reselling it here. You got 2 chances : Buy it for yourself , to learn from it, or just to buy it and get source for your lifetime use; Or buy it and resell (you got a fully working auth system on it. ready to make and sell keys.

PRICE OF IT IS : 150\$

[contract=tid]Start Contract[/contract]

Yes, you can check also my other selling thread for reviews of it. Panel is coded in c# [With backend in php & mysql]

while stub is coded in c++ / asm
