Thread: [Windows Defender Bypass \[HANDCRYPT\] \[Private/Shared Stub\]](#)

Moon_Developer - June 7, 2022, 2:22 am

Are you looking to encrypt your old rat ? botnet ? [e.g Quasar ? etc.]

Well, this handcrypt service is the best for you.

Easily Bypass Windows Defender [SCANTIME and RUNTIME]

The main purpose of this bypass is to keep your file undetected TO windows defender. So I won't REFUD it

if it get detected by other antivirus, that are not WD.

some useful infos. :

- > What's the file supported by this method?

: x64 / x86 .net / c# / asm - masm / native cpp

- > How much time this stay UD to WD?

: Honestly I didn't updated my method from 1 months from when im posting this, but expect to be more safe with private stub

- > I offer FREE reFUDS if WD file get DT on scantime and runtime.

Public stub price - > 50\$ (3 file crypt with same method and same stub.)

Private stub price - > 100\$ (3 file crypt with different method and different stub.)

stub is private and recoded for every customer that buy the private stub

what features can I add to the crypted file ?

- > Anti Virtual Machine (optional)

- > Startup (optional, not recommended.)

- > Anti Reverse Engineering (included, not optional.)

- > AMSI bypass (optional, only .net)

- > Usermode hooks (optional, beta)

- > Execution delay (optional, preferred)

- > Clone Assembly

- > Inject raw shellcode (Optional)

some links that i've scanned on some scantime + runtime scanned, just keep in mind that I frequently test this on my virtual machine for windows defender, all the other scanner and just for showcase, but i'm not interested in bypassing those, as stated in the thread

<https://antiscan.me/scan/new/result?id=kJexeyu0YJhZ>

https://kleenscan.com/runtime/scan_result/64a27c1e322df8f5e735075a8de1b7bec19b09726f6fdd111944c9994ae22c3f

https://kleenscan.com/scan_result/eac102491832ee0246b4be63656432159b0c206ab1a64507251c50160ab59be1

file output will be basically a .net file (ANY CPU) , that will be supported and can be run on every

windows version and server.

Stub file size will be approx. pumped by only 50/100 kb , depending from your payload.

Me, the coder, selling this service only for education purposes. I DON'T allow any malicious activities , and , if made , I'm not responsible of actions made only from the buyer.
