Thread: [\[\\$300\] Private Crypting Service](#)

Venus237 - June 7, 2022, 5:17 pm

Hello.

I have got to offer a "private" crypting service.

Stub is coded in C for x86, size can be 100-700 kb.

The method used is process hollowing (RunPE), without touching NtUnmapViewOfSection, from a project I have coded some time ago.

I can guarantee the output will be FUD or maximally 1-2/26 (minor AV engines like AhnLab, of course), probably for a long time, because I am going to do the crypt for maybe 5 users with recoding the stub every time.

I have no time for doing it as a long term service, I have coded this for myself because I was disgusted after using public("private") crypting services.

I am using Amadey, so the stub was not tested with another payloads, but I am going to do the refund or work it out, if you wish, if it will not work with your payload.

Only natives.

Price is \$300, payment method is Bitcoin only.

No free vouch copies.

Best regards, Venus.

High five to Impulse.

[contract=tid]Start Contract[/contract]

To gain trust you will want to do vouch copies, you have 1 b rating of buying bots and nearly no rep so it is difficult to trust you

ok and? its for a vouch copy to ensure he is legit, all i would do is go on a VM and test that it connects and do a checkzilla scan, and i use crypts from ImComplexed

Best of luck with sales, buyers make sure you use a middleman.
