Thread: [What services do you guys use for ranking youtube videos?](#)

Pretty much what the title states.

I understand some may not wanna share their "secrets" but in the past I mainly used to get a solid amount of views while the video was unlisted(around 20k) and then use programs that search for your video keyword/title and then go to it. The main program I used in the past for this was vagex but it's dead now. I was wondering if anyone knows of any other similar programs or services. I've tried using some smm panels and using their own services they categorize for best ranking but it doesn't seem to be doing much. Any help would be greatly appreciated!

I've also gotten some likes and custom comments added but am struggling to get additional organic views. I'd say my videos are definitely HQ and I've made some custom thumbnails to help with algorithm but haven't really progressed.

Videos rank on a number of factors. One of the most important is time on video. If your users aren't watching after they type a search term, then your video is probably irrelevant. Focus on making good videos.

Additionally, title, description, and thumbnail, are all super important for click conversion.

If you can get all these things together you'll rank for sure. No blackhat magic required.
