Thread: [Starting OSRS botfarm](#)

SIM-4375709 - June 12, 2022, 8:02 pm

For anyone that is still interested in this scene or ever has been this will be a good thread to follow. For some reason, my RS botting autism from 2010 recently kicked in and I'm wanting to get back into the scene...

Currently creating 99 WT HCIM accounts ?

Farm details -

Home PC

Private HQ ACTUAL Residential SOCKS5 proxies

One-two account(s) max assigned to a proxy via Proxifier-Plus

Using accounts I made back in 2009

OSBot VIP (mirror client)

Premium scripts

Bot less, break more on new accounts is the route I will be taking with these beginning ironman accounts.

One of the HCIM's progress

... And 100 XP remaining till 99

IParkerI - June 12, 2022, 8:22 pm

I am curious to see how you do. I just got into botting using dreambot and a premium script.

Definitely keep this updated, I'm interested.

SIM-3749878 - June 12, 2022, 10:23 pm

I will follow this. I also gave it a go with DreamBot, I bought VIP, Premium scripts, proxies from Proxy6 and used Covert Mode but still I got banned. Never heard of OSBot, good luck!

RS Endeavors - June 12, 2022, 11:13 pm

Would using Google Cloud VPS have you running your bots on a datacenter IP?

(Jun 12, 2022 10:23 PM)Sharky Wrote: [\[CITE\]](#) I will follow this. I also gave it a go with DreamBot, I bought VIP, Premium scripts, proxies from Proxy6 and used Covert Mode but still I got banned. Never heard of OSBot, good luck!

Those are poo poo proxies, that's why you got banned. Finding a proxy provider that is legit is single most important thing when running big farms. It's so easy for jagex to detect datacenter IPs. Tons of websites just slap residential proxies up on their site when they're just shotty datacenter proxies. People just trust that they are actual ISP/Residential proxies & get their farm banned.

MindkcuF - June 13, 2022, 9:18 am

Good luck with this, look forward to seeing your progress

Yeah I'm fucking retarded just thought about that last night, any opinions on good offshores? Was reading up on the Sandboxie method and am very fond of it

I've never used it before to be honest. Not 100% sure how it works but doesn't it just create a VM using your PC & cut your computer resources in half? How many bots are you planning on running on one IP? I've been running 5-10 accounts on one IP & haven't experienced any chain bans yet so..

I'll PM you a website I used to use that's pretty cheap but could probably only run 6-10 accounts. Site has a lot of options & I've been looking at the RDP's with an ISP connection.

Are you running these accounts from your PC? And yes basically you answered it haha.

Believe I am going to go with the Google Cloud VPS and use these HQ private proxies I've got and give it a go. Which bot do you use?

The key in my opinion is to constantly switch skills/tasks to prevent bans. Still testing this theory, but I switch tasks every couple of hours.

Also interested to see how progression is going, how many accounts are you running at once as well

However.. HCIM #2 got caught lackin' and got a 2-day

How much gold have you made from the accounts?

And it only got a 2 day ban for botting? I thought they just perm ban accounts

2 days are automated, manual perm chain bans are more likely to happen on big farms aka JMoD got your ass

After a 2 day ban, however, if caught again it'll be perm

How long would you say to make your investment back if you only ran one account?

Depends on the method you take/account build. Also need to put things into consideration like costs for membership/if you'll be botting on your home IP or proxified etc/and mostly importantly private scripts. If you can program them yourself then you're set they play a HUGE role in successful bot farms

I've never had much luck in botting, but tried it a few years ago and it quickly fell apart. I may give it another shot though.

Just testing out different methods and will scale from there.

All accounts survived thru the night, will update the thread later today

Maintenance is just membership fees on a new account if one gets banned, which isn't much.

I'd also like to know what scripts he is using and how much they are as some can be expensive. Interested in starting a bot farm too

Minor update on the farm 7/5/22 -

Have finally made the transition to 100% private custom-made scripts for the ironman farm and am confident in VERY low ban rates sticking to less crowded areas & other variables.

Like stated recently here are some stats from the past 2 weeks;

Accounts finished: 7

In progress: 10

Bans: 2 agility suiciders (expected, reported by other players @ seers)

Total Spent - \$63 excluding test methods I used with other resources & custom scripting assistance
