Looks great, and a great advertisement thread, good luck.

SIM-4375709 - June 15, 2022, 9:44 am

Good to see the RSPS scene is still going somewhat, good luck with the server!

Shrooms - June 15, 2022, 2:00 pm

Might give this a look, I haven't played Runescape in a long time.

Looks interesting,

I have been around the RSPS community since 2007 originally moparscape, this being said various things have changed greatly others have not.

Planning on downloading and playing the server a bit. After moparscape was sold from mitb to the idiot in charge currently, now the forums and everything else has been allowed to be ran into the grave.

I left as r-s is hit or miss in terms of enjoyment, runelocus well that is also hit or miss.

Anyways i will happily download and give this a go.

How is the pking/switching situation?

Also been around since mopar and silab, rsps's are fun as hell but only thing I'm really interested in is hybrid or tribrid pking

TSX - June 18, 2022, 1:33 pm

Silabsoft days back when you'd get ridiculed if you called yourself a coder and not a programmer.

I've been meaning to check out a new server.. and 317s are my favorite. I'll give it a try see you online!

Devolution/dodian v7 will forever be my favorite source.

Right there next to Czar which every fucking person in the world forgets is PI.

Yeah i have been around the runescape communities since 1999 and rsps since late 2006 during the time of czar predating that was tests of modifed winterlove servers then later known as czar after this many changes during that time spawned various servers.

Hellzend was czar based and was a buggy mess but it was awesome. The never versions are not the same and nor are they the same developer.

During this time period you have sliabsoft clients by missslabssoft and many client changes during this time bigger servers during this time where Figment Scape, fr33scap3 pkz and changes after that where richscape related to cheatskape and alora scape about 3 years later that updated the richscape source code.

Fun fact: richscape contacted all the current staff of rsps sites during a later time to have richscape source code removed as he left the community and didn't want the code listed anywhere after many of the servers and clients where lost as during this time pretty much everyone used megaupload.
(thanks three letter groups)

After that the delta era began with various issues itself as after the source code was released by delta you have dds specz among others and plenty of deltascape haters but giving no help other than trolling and making tutorials while griping that delta sucked as it was based on WinterLove era source code java 5 or 6 i forget,

After that Emulous came around ended up being a failure after a person named insanity created project insanity and this spawned the Project Insanity Era, Guess what people hated this too as it was old outdated and crap. Yes all of them have been overall but fun all the same as many actual programmers moved to real projects and got paid by bigger servers.

Then we had the battlescape source files hit or miss on time period i forget? i been around alonng time this was also hit or miss.

after 317 era we spawned 503 servers and so on..

Currently working on a server based on source from 2008 rewriting the networking, skills and client

using 317 loading 377 cache something people get confused 317 is not actually 317 clients it loads 377 cache most of them do.

Anyways i LOVE playing this server so please if you do decide to play it do its pretty fun just figured i would give a bit of random knowledge on this comment.

Sm0k3d0ut - August 4, 2022, 11:22 am

Zulrah this server looks good.

AxaXL - September 11, 2022, 4:00 pm

is the server still alive?

Edit: The AFK tree looks neat and actually is one thing attracting me to the server.

Azymis - September 15, 2022, 8:06 am

Sorry guys. The server was shut off.
