Thread: [Access to \\$170k honeypot eth address](#)

xPlutus - June 18, 2022, 6:53 am

<https://etherscan.io/address/0x4de23f3f0fb3318287378adbde030cf61714b2f3>

Long story short we got access to a honeypot addy, not the traditional "here are my seedphrase words" but an other way.

Now the problem is is it possible to put the contract that sends the gas fees on pause somehow or bypass it?

We are the only one who have access to the addy.

Problem I saw when I checkec etherscan is it says "this address has been blocked by a custodial stablecoin provider", will this be a problem?

Solution = % payout

Edit: Just heard there is some sort of python script attached, idk if thats relevant just sharing.

Im not sure i bet google will give better responses then here for this sort of thing.

Trouble shoot it but chances are its only allowed to be withdrawn to one specific address or maybe something more complex .

I've been looking all over the place haha just found something which could be a solution, just need to find a way to install it haha. Will update on the progress!

Thanks for your input :)

Yes. That \$170k Tether is blacklisted, even if you beat the bot you can't touch that Tether. It can never move, it can never be redeemed.

There is nothing that you can do to win here.

I presumed so, other members also told me, shame.

Fucked up for the owner of that address as well lol.

I've seen this issue on here before, I believe the solution was to use something faster like a flashbot to outspeed the contract.

shreder - June 19, 2022, 12:25 pm

We got access to your honeypot address, not your way... top sekret method is another way sekret dokumants.

OP thought he made it rich ?

Unlucky that it's blacklisted.
