Thread: [Create a shortcut with admin rights for the current vbscript or any other application](#)

Hackoo - June 19, 2022, 11:05 am

Hi ?

I made a subroutine in order to create a shortcut for the current vbscript or any other application with arguments using an array that can be called as follow :Example 1 : Create a shortcut to the current vbscript on the Desktop

Code Create_Shortcut Array("Desktop","ShortcutName",WScript.ScriptFullName) ORExample 2 : Create a shortcut to the current vbscript on the User Startup Folder

Code Create_Shortcut Array("Startup","ShortcutName",WScript.ScriptFullName) ORExample 3 : Create a shortcut for Network Diagnostics with arguments to fix connections problems on Desktop

```
Code 'Create_Shortcut Array(_
' "Desktop",_ '<=== "Desktop" folder and you can change it to "Startup" folder if you want
' "NetworkDiagnostics",_ '<=== ShortcutName
' "%SystemRoot%\system32\msdt.exe",_ '<=== Executable Target Path
' "-skip TRUE -path %Windir%\diagnostics\system\networking -ep NetworkDiagnosticsPNI",_ '
<==== Argument to pass for the executable
' "%SystemRoot%\system32\msdt.exe,0",_ ' <=== Icon Location
' "Network Diagnostics to fix connections problems",_ ' <=== Description of our Shortcut
' "CTRL+ALT+D" _ ' <=== Set a HotKey
') Run_As_Admin_Create_Shortcut.vbs
Run_As_Admin_Create_Shortcut.vbs (Click to View)
```
