""We found a selective temporary decline of sperm concentration and total motile count 3 months post-vaccination, followed by recovery"

Expect Pfizer to re-package mRNA as a male "Birth Control." ?

We can expect Pfizer developing a drug for men with low sperm counts. Nicky Minaj was fucking right

Last years conspiracy theories are today's truth bombs. The authors took advantage of the Median vs Average differences to suggest all is well after 150 days after vaccination. It also raises a number of questions about whether and to what extent this could be impairing other testicular function ...

Good I can stop using a cocksack now, and go back to rawdogging girls.

And thats no joke, I really dont want kids, and I hate condoms.

Yeah i read about this, Things like this make my blood boil work among other places pushed and pushed the vaccines that are actually more or less a shot that lessens the symptoms.

I took it even though i did not want to because of health concerns that are on file, my boss told me this yes i agree with you but if you would like to keep your job just like i needed to keep mine you are required to take it useless or not.

A very friendly boss and professional yet it's sad people died from it and these issues occur because lack of proper testing and virtually no discussion of the actual topic needed to be discussed.

It's a control mechanism i took the shot because i like having a job and not being homeless more than i do respecting the rights i was given at birth as we all are. Humanity has the right to do what they feel is right but this is another topic all together.
