Thread: [How do you steal a Wifi Password?](#)

4lek5 - June 20, 2022, 5:45 pm

Hi all, How do you steal a wifi password for a hotspot?

SIM-5186353 - June 24, 2022, 3:05 pm

Hello, it's quite easy as well as difficult, search github for repositories and you will surely find several things, I recommend wifiphiser, I don't know how it will work with other people (I've only tried it with myself), it worked with me, it gave me the password perfectly. And if it's not phishing, it's brute force, but I think you'll die and you won't have gotten the password. There are more methods but it would take a year to explain it to you, these are the best known.

TheNonStopper - June 25, 2022, 12:27 pm

Brute force would take a life time

Korek Chop Chop and/or deauthentication attack may be used to force yourself into the Wi-Fi network, usually often done in WPA networks,

I have no idea why is phishing even related to this? Quite wrong answer the other person gave, it literally takes a week or more if it is WPA2 as you require more intervention with the router than social engineering which is a complete different subject (Read rules).

Other attacks such as jamming the Wi-Fi or spoofing may be used and could be successful. I do agree with the other person that a dictionary attack will take longer unless you know the individual and create a wordlist yourself, this best case is an attack using your GPU. I do not specialize in Wi-Fi attacks but more in networking side of them.

If you managed to bypass the AES by using such programs as aireplay-ng along others, then easy but will take time, yet some routers are aware of this attack and will block. Best way is an deauthentication attack or war driving.

Capture as much data with aireplay-ng and watch how easy it is to crack.

If you are within the network, watch some videos using command prompt within Windows 7/8/10 to steal. I do not recommend this method or suggest unless authorized by the individual.

That is all i will state than the other individual's wrong answer, some script kiddie he/she is lmao.

I won't say its easy to hack wifi, but most will say it is, but for me, its 50/100 and here how i can help , i suggest you using the popular tools like aircrack-ng and firstly try to obtain the handshake of the network so you can perform the aircrack-ng, if the wifi u trying to hack it has WPS ON, you can use Waircut or RouterScan but make sure it has 1.0 verison WPS! good luck

h.u.s.h.u.s.h. - July 1, 2022, 12:49 am

The aironet/airodump suite, wifite, bettercap will get you the handshake in minutes if not seconds. That's the dumb way if you don't wanna know much of what you're doing, just click a bunch of buttons and wait.
