Thread: [GeoDoxing/GPS Doxing \[New Doxing Technique\]](#)

Investor - June 23, 2022, 3:20 am

So this technique is rather simple.

Go to the old iplogger dot org and scroll down to where it says "Location Tracker"

Generate a location tracker,

now a bit of this method will involve pretexting, sometimes I like to fuck with people who are overconfident in their VPN's security/privacy. So calling out a complete retard might work, this method is really effective, but easily mitigated. So a proper pretext will be an essential part of this, if you want a private script inbox me we can talk more about it.

Now get the victim to open the link, you can mask it but they will be prompted, and have to hit "allow" to share their location. This is essential, you'll be given their GPS longitude, and latitude. This can be as accurate as 100 feet away, or may be inaccurate it depends on the quality of the data.

Now you need to do a process called reverse geocoding.

Plug the coordinates into this website; it'll spit out a street address

<https://www.latlong.net/Show-Latitude-Longitude.html>

Next to over to whitepages reverse address <https://www.whitepages.com/reverse-address>

And it spits out the persons info, if multiple results call them with google voice, or textnow and see if they freak out; if they do its a good sign you've found them.

Armani24 - June 23, 2022, 7:43 pm

So it involves the victim to hit "allow location"? Wouldn't that be obvious though?

You write in the thread that you can mask the allow location part, but they will have to click allow, so my question is how do you mask it?

As stated

Code now a bit of this method will involve pretexting, sometimes I like to fuck with people who are overconfident in their VPN's security/privacy. So calling out a complete retard might work, this method is really effective, but easily mitigated. So a proper pretext will be an essential part of this, if you want a private script inbox me we can talk more about it.

You cant fix stupid ???

bottleofwine1 - June 27, 2022, 3:52 pm

thanks , i will try this out.

MaDNeZ8898 - August 24, 2022, 2:11 pm

Thanks for sharing! I'll try it out

how do you get a victim to click a link and then click allow? wouldn't they get suspicious?

SlaughterSec - September 18, 2023, 1:56 pm

You'd be surprised as to how many people just blindly hit allow. Luckily, for the sake of society, cyber crime has been catching the eyes if daily users and they pay attention more, however there are still many morons in existence.

spyrocockli - December 6, 2023, 2:57 pm

This aint nothing new and can be very inaccurate jfyi

dtb1031231 - March 27, 2024, 8:09 am

I think it'd be quite hard because you have to make people click allow.

Gracious - May 13, 2025, 12:48 pm

Would like to take a look, thank you
