What can be done:

[Auto reply to new messages \(AI\) - Video](#)

[Send live snaps to all friends - Video](#)

[Create mass sc accounts - Video](#)

[Accept Friend Requests - Video](#)

[Schedule story posting - Video](#)

Send Friend Requests

Mirror physical device

Software is Multithreaded.

Based on huge demand we have created plug & play software for sc.

Software comes with instructions on how to install it and examples with explanation on how to use it.

If something doesn't work I'm available to jump in over teamviewer and help!

Yes, it can manage multiple accounts at once.

The software is Multithread.

Also, you can do different actions, like one emulator/device can do friend accepting while second emulator does friend adding etc

Is this based on ADB commands or just a macro in a GUI shell?

I'm asking because anything needing an emulator or runs through ADB commands is extremely inefficient.

From what I can see your bot is based on steps and navigates the UI, making it hard for me to believe this can be efficient when it comes to multithreaded use.

Could you explain what the base logic of your tool is?

Sorry mate I can't say how the bot works.

Regarding multithread, new videos with multithread will be available soon so you will be able to decide is it efficient or not.

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,

Hi,

- 1) If you are using emulators then it depends on your specs of PC/VPS
- 2) Shadow-banned? You can be banned if you spam without delays, I don't know what shadow ban does on sc, please explain
- 3) Software accepts 10 people with random delay between pre set min and max sleep time. Then it would sleep again for next 10 people
