Thread: [\[FREE\] Discord: Reverse Image Search Bot](#)

**killaxia** - July 13, 2022, 6:02 am

So, this morning i made myself a reverse image search bot to help server owners (like dating servers) combat catfish, for free. It's a project i'm going to fund with hosting/bot creation sales and then maybe donations, if ever.

How this works

Get image from user, either with a "reaction (:mag:)" or with a command (.search [url]).

Push data to TinEye API

Push data to Google Vision API

Retrieve data and save all results to server

Show information about image in a clean embed to user either in a private DM or in the channel it was sent to. (DM will stay DM, reaction :mag: will be DM and commands can be DM or server channel)

Data is que for removal after 7 days

This bot i made costs me roughly \$7 per 1,000 images searched and \$24/mo hosting for the server. It's not expensive at this time and i'd like to offer it's services FOR FREE to all servers and users. You can invite the bot or join my code-server to use it.

I currently am the sole developer and manager of the server/website it's hosted on and the server where the bot is hosted. I am not looking for members of staff.

Invite the bot to reverse image search in your servers today and leave a review if you liked it!
