Thread: [hNuke SMS/Email Bomber with AuthGG Integration \[Open Source\]](#)

Investor - July 14, 2022, 12:00 am

Originally I'd thought about selling this shit. Put the code up for auction but with minimal interest, so now its open source.

Lets see how many fucking clones pop up lmao. Here's the source, use it how you see fit.

Link me to copies, variants you make of it I'd love to see how my creation evolves.

Hope its of some use.

Just download visual studio and compile it.

The sms bomber looks to only work with western countries carriers?

Mercenary - July 17, 2022, 2:09 pm

I mean, SMS Bombers don't typically market well because they are very easily made. Most people can just Google "C# SMS Bomber" and skid the code from somewhere, or find tutorials on how to make one.

The real market is something that can't just be Googled and found already.
