Thread: [4 CPU - 16 GB = 1\\$ | 8 CPU - 32 GB = 2\\$](#)

Moskeeto - July 21, 2022, 3:40 am

Welcome to Moskeeto's.

Spoiler ([Click to View](#))

Thread design is under work

30 days of 4 CPU - 16 GB, 100 GB SSD M.2 and Up to 25 GBIT/s connection = 1\$

30 days of 8 CPU - 32 GB, 100 GB SSD M.2 and Up to 25 GBIT/s connection = 2\$

These prices are for Both Linux and Windows machines.

Regarding Windows: the usual servers edition up to the most recent.

Regarding Linux: Ubuntu, CentOS.

These servers are not shared, means that no one has access to Your server other than You.

You will be provided after purchase: IP, USER, KEY(if Linux) or PASSWORD(if windows)

For Different Configurations (Or Bulk purchase) (Cores, RAM etc. contact and ask)

Disallowed:

Spoiler ([Click to View](#))

CP

Mining

Port Scanning

DDoS

the hosting provider will detect it immediately in less than 5 minutes and shut down your server automatically, you won't even make your 1\$ back in that timeframe and You will be blacklisted from our service.

Everything else is pretty much allowed and it's up to You to make sure it is legal in Your jurisdiction.

This offer is best for Bot runners that need a good amount of bandwidth / cores to run bots, checkers or crackers (using proxies).

Rules:

Spoiler ([Click to View](#))

You acknowledge to not run anything mentioned above as disallowed. Penalty: Automated/Manual shut down with no refund and blacklist from the service.

You acknowledge to leave a mandatory feedback by the next 24h after having received the order,

this rule can be bypassed with a 50\$ payment. Penalty: Manual shut down with no refund and blacklist from the service.

Addons:

Let say, I want to host a website, on a linux machine, with port 80, 443 and basic cPanel port open, will it be possible to do so? Can I host websites in the server if I got linux? Also, I got a confusion,

So, basically if I purchase a \$1 server to test out the speed, I need to provide a vouch / review within 24 hours of purchase or else my service will be shut down and get myself blacklisted.

Moskeeto - July 21, 2022, 3:58 am

So, basically if I purchase a \$1 server to test out the speed, I need to provide a vouch / review within 24 hours of purchase or else my service will be shut down and get myself blacklisted.

Thanks for the interesting questions that allow Myself to clear up the confusion and provide more information regarding the service:

1) Yes, You will be able to setup Websites, Cpanels, Wordpress and Anything You might want to setup, these are 100% ROOT instances (both Windows (Administrator)) and Ubuntu/CentOS ROOT.

This means setting anything up You normally could on both Linux and Windows servers.

These are Not hacked servers, hence the only person that will have access details and control of the machine will be You, allowing to create websites and manage them Yourself safely.

2) That's correct, You have to post a feedback mandatory once for the first purchase from us, explaining Your experience and quality of the received product.

For the privilege to not have to follow this rule, You can eventually pay 50\$ to bypass this rule. (Ex: You do not want people knowing where You're taking Your servers from)

MentorPEN - July 21, 2022, 4:14 am

Well I think I will get banned here for providing 100 reviews or 10 reviews of the same product. I don't think you are allowed to multi-vouch for a single sales thread.

Also, they are not microsoft or azure or AWS cloud credit similar servers right? Might be interested into hosting mysql database but if they are cloud servers, my data might go lost if the credit runs out, will it be possible to have solusVM or similar panel to hard reboot, turn on tun/tap etc and reinstall OS in case of some wrong installation error?

These accounts are running from Credit, Yes, and Your server cannot be repurchased for a second month, only 1, this means You'd either have to do a backup and purchase/setup on another server or start fresh with the setup on a new server.

These are mainly meant for Cracking, Botting, Fast Flux, VPN, Browsing and not for anything that would be too much of an inconvenience to backup and restore when it will inevitably shut down due to not being able to repurchase it for a second month.

Altho, if You have knowledge as it seems, You could as well write an automated Bash script that will download and setup everything automatically basically starting from Your backup once Your first server will go offline, if We see enough interested people into our services we will integrate automated API's for deployment of servers using Your purse's deposited credit and settings in which You will be able to specify the URL of a bash script and will return to You the server's IP so You could as well automate the DNS record for Your domain (If You can afford to have the site offline for a couple of seconds/minutes in cases where this will be suitable)

Sticky Bot - July 21, 2022, 4:25 am

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on 07-28-2022. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Interesting, I got hooked on fastflux. I first thought to get few servers from you for \$1 and setup as proxy servers for fastflux, but if I get blacklisted hosting a botnet or so by making it a fastflux machine, will I then not loose all my purchased server? Basically you are giving azure or cloud aws machine if I am correct. Anyway, good luck with sales, seems if I use these you will terminate my servers,

BTW, you should've posted here:- [Hosting Services](#) (Hosting marketplace)

Fast Flux was mentioned because it's a technology which doesn't require continuity to work (Ex: a database, etc.) so it could be fast setup and gone, in the case of such a usage

You would be blacklisted only if You were to purchase a small amount of servers because it would be hosted on the same account as others and You could pose a threat to them, in case You purchase a minimum amount which would be hosted on a dedicated account to You, there would be no blacklist.

If the minimum purchase and the time required for someone to find and then report and for the provider to take action on it makes it worth for you to do this, then you could as well setup fast flux and if you were to get the servers suspended, you would not get blacklisted

regarding the post.....

i paid a sticky to the wrong section and so it disappeared from the correct section...

i dont want to make it a double work for the administrator to also delete a new thread after moving in case he notices my request to move it and i will wait his response before posting in the correct section in case he decides not to move this thread.

And you didn't answer my last question, will I be blacklisted or server suspended if I do not post review / vouch for each server? As much as I know, multiple vouching or rating the same thread again and again is considered spamming, and not only mine but other users account might also get warning or banned, so how can I evade the suspension in this situation? And I would not love to pay \$50 for a single server which is running on credit and cannot be renewed next month. Too much for a disposable one time use server! Thanks..

Moskeeto - July 21, 2022, 5:34 am

in order to meet this forum's rules i guess it's suitable to change this into a one time only mandatory review

edit: changed

CrazyRDP - July 21, 2022, 12:45 pm

You know it is not allowed to offer carded products on HF?

MentorPEN - July 21, 2022, 6:28 pm

(Jul 21, 2022 12:45 PM)CrazyRDP Wrote: [\[CITE\]](#) You know it is not allowed to offer carded products on HF?

I don't think it is carded, It is like azure subscriptions with edu email method or such similar, I talked with him but seem like they will be valid for 1 month only, like a disposable temp server. Could use as CDN at best. With the package description it feels like microsoft or aws amazon cloud credit services, or might be linode!

Cheers!

CrazyRDP - July 22, 2022, 2:49 am

The reason why it is only alive for <1 month is because its carded. AWS/Azure/Linode will suspend the service when it can not charge the credit card.

Pretty sure it is carded credits, such offers will always die very fast because the credit holder keeps getting banned and they will randomly lose their VPS and eventually the user offering it will exit scam. Seen this many times in production.

MentorPEN - July 22, 2022, 3:42 am

It is possible to get carded credits, and, I agree with you, but it is also possible to have an .edu email or a company email for example (admin@yourdomain.org) and claim free \$200 credit off microsoft azure or amazon cloud services. I have done it myself, registering 99 cent domain from namecheap and claiming free \$200 credit from microsoft azure account! So, I won't jump into conclusion. OP should reply to this thread to clarify the questions against his offered services!

Well good luck with sales!

Moskeeto - July 22, 2022, 6:06 am

You know that its allowed but shameful to cry like a bitch at your competitor for offering a service for cheaper than You?

There is no carding involved, next reply post some proof if you think otherwise or You will be reported to the admins for sale trashing.

Customers receive a VPS. VPS works for x minimum guaranteed time up to y days for the advertised price. I'm just in the position where I can offer a better service.

By the way, Due to bank Regulation, to attach a card to AWS, You need to complete Verified By Visa / Secured By Mastercard which would not make it worth to do for this context, as if You had knowledge in the field You'd know that "Bypassing" VBV / MSC, You would be "better off" carding crypto.

The only reason for why not longer than a month is provided is because it would require too much effort to calculate the available credits against different running VPS and we would not be able for such prices to manually manage and keep track of the spending, remaining or provide a long term hosting for anyone, due to the possibility of such niche to run month by month (cracking, generating) we thought (as proved by received orders lol already 8 servers ordered) that its possible and more

feasible to run in such a way and a fixed amount of servers for each account with no management or more math involved.

thedoller - *July 22, 2022, 8:14 am*

hey i want to buy windows os vps

Eclipse - *July 22, 2022, 9:30 am*

how can i contact you? interested

thedoller - *July 30, 2022, 2:19 pm*

Did he disappear? I wanted to buy rdp lol

leanas420 - *November 3, 2025, 1:37 pm*

i paid a sticky to the wrong section and so it disappeared from the correct section...
