Thread: [CRYPTO CURRENCY EXCHANGE PLATFORM | BLOCK.IO API | Full Setup + Support + Profit](#)

MentorPEN - July 30, 2022, 6:45 am

Thread Design Coming soon.

A full working crypto exchange platform built from scratch. Coded with simple php and is not encrypted in any form, so, should be easy for you to modify. I will also provide setup of the exchange platform and guide you through setting up auto exchange using BLOCK.IO API (you can also use coinpayments.net API), users can auto exchange the crypto currency all exchanges will be done real time using block.io or coinpayments api with 0% fees charged by them. You can set custom withdrawal amount, custom fees per exchange and much more. Other features can be also added on demand.

I will also provide support for google ads and get you easy \$200 google ad credits to advertise the platform. Provide you specific keywords to grab atleast 10K organic and individual users from google ads in one month. You can also launch/create your own custom token on the exchange platform to use as exchange fees, withdrawal fee, and much more.

Platform also can have future market, referral program, affiliate program and other requests on demand.

You will only need: Google ads to get users which will only cost you around \$30-\$50 as investment for around 10K-15K organic leads from high value crypto-currency based keywords. Custom package users will get Premium High Value Keywords from selected locations, where people are not much aware of exchanges like Binance and will surely register on your exchange.

-- FAQ --

It support both Offline/cold wallets and API based cloud wallets.

So yeah, admin can implant cold wallets as well as cloud wallets (using block.io api)

Funds deposited in cold wallet will be transfered to the master cold wallet of admin, and funds deposited in cloud wallet will be deposited to admin's block.io or coinpayments.net account.

KYC verification and passport, DL, taxid, phone number verification are also added as security feature.

OTP Based and 2FA based login also can be implanted on demand.

All deposits are verified and funds are shown automatically after deposit and can be exchanged or used after set certain confirmations.

Pricing: Basic: \$139 (Full product + Installation + Basic Support + Custom Front / User / And any amount of requested static pages + Google Ads Setup with Keywords)

Advance: \$179 (Full product + Installation + Full Support + Custom Front / User / And any amount

of requested static pages + Google Ads Setup with Keywords + \$200 Google Ad credit)

Custom: \$199 (Full product + Installation + Full Support + Bulletproof Server Hosting + Custom Front / User / And any amount of requested static pages + Google Ads Setup with Premium Keywords + \$200 Google Ad credit + Custom Requests for OTP login, 2fa and other custom options and requests)

Are you able to do a Crypto -> Crypto exchange with set fees (tx fee + site fee)?

Non-KYC ofc since no fiat is being exchanged.

Non-KYC ofc since no fiat is being exchanged.

Yes you can. KYC is just an option added if needed, some clients might want to include kyc and other other document submissions or OTP based 2fa so the option is available. You can choose to implant it or you can choose not to! Depends on you or the client.

For example, You got 20 TRX and want to exchange/trade it for USDT. Basic Network fees for TRX is 1 TRX, so, when a User exchange/trade 20 TRX worth of crypto he will receive 19 TRX worth of USDT. i.e. 19 TRX (+1 TRX network Fee) = \$1.33 USDT

Now, if you set your own custom rate, then the original network fees + the custom rate will be deducted and then exchanged/traded,

Custom Rate set to 3 TRX in the Exchange admin panel

Now, when a User Exchange/Trade 20 TRX for USDT, he will receive 16 TRX worth of USDT i.e. 16 TRX (+3 TRX Custom Fee) + (1 TRX network fee) = \$1.12 USDT

The 3 TRX will be combined along with the network fee and show as 4 TRX network fee (3 TRX Custom fee will be hidden and combined with the original network fee)

The 3 TRX which you set as your own custom fee will be your direct profit and will stay in your master wallet. Which means only 17 TRX will be exchanged/traded including the network fee and 3 TRX will stay in the master wallet untouched.

Hope this clear your doubts.

"Funds deposited in cold wallet will be transfered to the master cold wallet of admin, and funds deposited in cloud wallet will be deposited to admin's block.io or coinpayments.net account."

So i buy the whole thing and you get all the money that gets deposited?
And i get nothing?

And i get nothing?

I meant you can store you deposited money to your own block.io or coinpayments account, or your own cold wallet which you set. Not mine. I think you misunderstood a bit! Contact me for more detailed information!
