Not to take away from the service you're offering, I'm sure you're offering a solid service but I cannot understand how you can offer this for \$0.10 per review without some loss of quality.

I have offered this service and still offer it to select customers and I charge \$10-15 per review depending on if it was a bulk order or not. If you'd like to explain a little about the quality of each review, geo location, proxy usage, email account usage I'd be really interested in hearing how you can offer this at such a reasonable price.
