Thread: [Can someone explain me how to buy exact number of coins on pancake swap?](#)

**ShinsekaiCorp** - August 7, 2022, 10:11 am

Every time i put to buy e.g. 1000 coins it always buys less than that.. 985, 965 or something

How do i set so it buys the exact amount i want?

This is most likely because of slippage. You could reduce the slippage, but the transaction will have less chance to confirm during volatile times.

I know why its happening. Its because of slippage and fees. Im asking HOW to set it up so it automatically takes my money for slippage and fees and does whatever it needs to do so i can end up with the EXACT coins i want?
