Multibrowser.io | Manage Multiple Accounts with Virtual Browser

Quick showcase video:

[Video: <https://www.youtube.com/watch?v=LsH2Yng0UKI>]

Q&A

Spoiler ([Click to View](#))

Q: Do you provide free trials?

A: No, we don't offer a free trial, but we do offer a 'Free 10 browser profiles' plan.

Q: Besides the proxy which settings do I need to configure as a user by myself?

A: You don't have to do anything yourself, except for adding a proxy. MultiBrowser will create random fingerprints for each profile you create. These fingerprints are unique and automatically generated for every profile. Adjusting fingerprints manually is only for experienced users.

Q: Is every browser profile unique?

A: Yes, it is! Some features like user agent can be the same but since there are always certain features which are different the resulting profile will be unique.

Q: How do I create a new browser profile?

A: You can create a new browser profile by pressing "new browser profile" in the left menu. In the overview tab you can enter a name for the profile and select which operating system the profile should emulate. Next, you can configure settings like proxy, timezone, geolocation and webrtc by going through the "new browser profile" menu. You can check the validity of your proxy in the proxy tab by pressing "check proxy". When you are finished with the configuration, you can press "create browser profile" in the right menu.

Q: Can I customize fingerprints?

A: If you want to customize your browser profile with self-chosen fingerprints MultiBrowser has some extra features for you. You can customize your Geolocation, add some fonts or change the amount of media devices. Please note that these steps aren't necessary if you just want a regular browser profile with browser profile fingerprinting automatically managed by MultiBrowser. We can ensure you that a browser profile with your Proxy and browser fingerprinting management by MultiBrowser will make you able to manage your browsers safely with no leaks.

Be aware that if you don't manage the fingerprint settings correctly it may cause extra risks for your profiles. We therefore recommend that you only change these settings when you know what you're doing.

Q: How is this different than Google Chromes profiles?

A: MultiBrowser creates an unique fingerprint for each profile, normally your chrome browser has identifiable information. So even if you use a different proxy you can still be tracked. Information such as Canvas, WebGL, Useragent, font fingerprint, http headers stay the same when you use Google Chromes profiles. When you use MultiBrowser these fingerprint will be unique for each

profile.

Keep your work up

I'll keep this thread in my mind

One question, is it just a browser?

One question, is it just a browser?

Thank you for your reply!

The application can be used if, for example, you have multiple Instagram, Twitter or Facebook profiles. Every profile you create in Multibrowser is unique and separated from any other profile. This prevents your valuable social media accounts from being linked to each other. For example, if one of your accounts is banned for any reason, your other profiles will not be banned if you use Multibrowser . This will of course happen if you access all your social media profiles from just one IP address and browser environment if an account is then banned, all your other accounts will also be banned. This is just one reason for using Multibrowser.

In short, Multibrowser creates a unique browser environment for every browser profile you create. All you have to do yourself is add a proxy.

BikerDude - August 9, 2022, 12:08 am

I have a qus , what the difference between Chrome New Profile and Multibrowser? in chrome new profile i can add a new proxy and a unique browser too.

My use case is creating Multi [BRAND NAME REMOVED] accounts

Thanks in advance and good luck

You can create new profiles in Chrome and Firefox which also have a unique fingerprint, however most of the fingerprint addons create random noise instead of persistent noise. This means that each time a website sees the profile it looks different. What Multibrowser does is create a persistent unique profile which keeps its fingerprint the same each time a website is visited. This makes a website see you as just another random user.

Thank you, I'll give a try soon!

It'd be wonderful if you offer 2-3 days trial before buy too.

Lextian - August 9, 2022, 5:01 pm

I actually work a lot with multi browsers and most that I use they give 10 free profiles, that way you can work with this and if you need more simply upgrade.,

I would advise trying to add something similar, trust me people want to test before buying. GLWS.

Hello, do you offer lifetime plan?

RaZoR - April 18, 2023, 9:40 pm

Is it possible to automate the browser using Playwright or Puppeteer?
