Thread: [Where can I host my exe for a direct link?](#)

A13x - August 15, 2022, 11:41 am

I used GitHub but they're taking it down and closing the accounts. Discord do not let me upload because it's flagged as a virus, even though it's FUD. Please let me know.

Best suggestion i could give you is use your own private hosting or even shelled accounts to host it, thus giving you more then one way to keep it there a while.

You could use slack, maybe some sort of hosted gitlab, maybe host it on an already ratted machine with ngrok.
